Mobile UX Prototyping, UXD-M
Exercise, Winter term 2026/27

Assessment Criteria
Prof. Dr. Simon Nestler

Parts A, B and C · Seminar paper (D)

What is this sheet about?

This sheet shows how your work is graded: the three presentation parts A, B and C and the seminar paper, called D here. The questions below are the questions the lecturer asks while grading. Use them while you prepare, and check your slides and your paper against them before you upload.

How the points are made up

Part	Category 1	Category 2	Category 3	Total
A · results of sheet U1	Content 10	Presentation 6	Discussion 4	20
B · results of sheets U2 + U3	Content 10	Presentation 6	Discussion 4	20
C · the whole track U1–U5	Content 14	Presentation 10	Discussion 6	30
D · seminar paper	Synthesis 15	Patterns and evidence 10	Language and form 5	30

How the questions are judged

- Each category has three guiding questions, and each question is judged on four levels: **outstanding, good, adequate, weak**.
- The points of a category follow these levels as a whole. They are not a checklist where each item earns a fixed share.
- Completeness is a threshold, not a score of its own. If a required building block is missing, the content (in D: the synthesis) is at most *adequate*.
- Each category gets a short written justification, and so does each part as a whole.

Part A: the results of sheet U1

Content (10 points)

1. Is every market claim checked along measurer, year and population? Is the source chain traced to the oldest origin you reached, and is a flip condition named?
2. Is each dominant pattern *named*, with its source (Tidwell, HIG, Material 3, Mobbin) and a recognition feature, rather than described?
3. Is each deviation judged as innovation or error, with one of the three legitimate reasons and its price? Where there is no deviation, is that finding argued?

Presentation (6 points)

1. Does the talk open with the team profile (the strongest statement, the shakiest claim, the one pattern decision), so that the slides argue rather than list?
2. Does each slide carry one point that can be read in a few seconds, with its evidence (screenshot, source) on the slide?
3. Does the team stay within 15 minutes and 10 content slides, with clean hand-overs between members?

Discussion (4 points)

1. Can each person defend their own claim check when the source is challenged?
2. Can the team say which of its statements it would withdraw first, and why?
3. Can each person defend one pattern decision with its source, without reading it off the slide?

Part B: the results of sheets U2 and U3

Content (10 points)

1. Is the severity verdict justified along the strain line? Does the design question come out of the fire sharper than it went in?
2. Is the fidelity block complete and argued: question, chosen rung, justification via the decision rule, and the blind spot with its later cost?
3. Do the three states carry protocol lines (decision · reason · discarded)? Is every audit finding answered with accept or refute, and a reason?

Presentation (6 points)

1. Is there a visible thread from the design question through the fidelity decision to the iterated states?
2. Do the slides show the prototype states themselves (before and after), rather than describe them?
3. Is the most important discarded alternative shown, so the audience sees what the decision cost?

Discussion (4 points)

1. Can each person explain why their rung is the cheapest one that still answers their question?
2. Asked about a refuted audit finding, does the person argue with evidence rather than preference?
3. Can each person name the next test, and the result that would change their decision?

Part C: the whole track U1–U5

Content (14 points)

1. Does the talk join all five sheets into one argument about the prototype, instead of five separate reports?
2. Notifications and dark patterns: is the notification concept tested against the filter? Is the borderline case filed honestly, with a consequence for the design?

3. Offline: does the concept say what stays usable without a network, how the conflict case is resolved, and which default the conflict dialog sets?

Presentation (10 points)

1. Do the 30 content slides follow an arc the audience could retell: question, decisions, evidence, open points?
2. Is the prototype shown at work (states, flows, the conflict dialog), not only described?
3. Does the team stay within 15 to 20 minutes and leave the discussion enough room?

Discussion (6 points)

1. Does the team actually moderate: open with a question to the group, take up contributions, and close the round?
2. Can each person answer a question on a sheet they did not lead?
3. When a dark-pattern verdict is challenged, does the team argue with the criterion rather than with good intentions?

D: the seminar paper

Synthesis (15 points)

1. Does the paper join all five sheets into one line of argument, carried by a design question from the first page to the last?
2. Is every decision argued with its price and its discarded alternatives, including the two focal points, notifications and dark patterns?
3. Does the paper name its own blind spots and open points, and say which finding would change its conclusion?

Patterns and evidence (10 points)

1. Is every pattern named with its source and recognition feature?
2. Is every market or user claim backed by measurer, year and population, traced to the oldest source reached?
3. Are prototype states, protocol lines and audit answers shown as evidence (figures, excerpts), not only summarised?

Language and form (5 points)

1. Is the paper about 5,000 words (4,500–5,500), with a structure a reader can follow from the headings alone?
2. Are sources cited consistently, and is every figure referred to in the text?
3. Is the language precise: claims stated plainly, terms used consistently, no padding?
