

This sheet is your self-check before submission and before the colloquium. The criteria below are the real grading anchors of the course; only the stakes are simulated. Check them honestly. A gap you name yourself can still be fixed before submission or defended in the colloquium. [OPEN: the weighting of seminar paper vs. presentation in the final grade is not yet fixed. Until it is, treat both halves as fully grade-relevant.]

Part 1 · The seminar paper (3,000–6,000 words)

Go through your draft criterion by criterion. Note in each box *where* in your paper the criterion is met (chapter, page), or what is missing.

S1 · Market claims carry sources. *Every market claim carries a source and a year – or is labeled as an assumption.* Labeled assumptions are legitimate; unlabeled ones cost points.

--

S2 · Patterns named with sources. The analysis chapter is organized along the four pattern families; every pattern naming carries a source (Tidwell / HIG / Material / Mobbin, with access date).

--

S3 · Findings ranked by severity. Top findings are ranked by severity with the group-built rubric (as versioned in Moodle), and the strain line is there: where the rubric strained on your case.

--

S4 · The exposé's four elements hold. Design question, fidelity level, rule-based reasoning, and the self-named blind spot, on half a page, plus the declaration line (the fifth element on sheet U2). The blind spot you named yourself counts toward the grade.

--

S5 · AI declared, discards documented. Every tool run carries the four-line declaration; the *Discarded alternatives* chapter demonstrably feeds from your iteration protocols.

--

S6 · The audit element is answered. Every auditor finding is accepted or refuted *in writing*, each answer anchored (rubric line or context criterion); a refutation is argued; nothing is left unanswered.

S7 · The friction inventory exists. The concept chapter contains a friction inventory: deliberate frictions and whom they protect, removed frictions and what they cost. "No friction present" is inadmissible.

S8 · The notification decision is reasoned. If the project contains a notification decision (including the decision *against* notifications), it is reasoned along the four building blocks, and the renunciation sentence ("We do not notify when ...") is there.

S9 · The offline scope is decided. The offline scope of the concept is measured against Exercise U5, or the renunciation is reasoned. Unvalidated conflict-UX claims carry the label *design rationale, unvalidated*.

S10 · Dark-pattern findings are filed triply. Every dark-pattern finding carries the triple filing (taxonomy, legal anchor, your verdict), with the three levels kept apart. Your verdict is not graded; its clean separation from naming and legal anchor is.

S11 · Pending stays pending. Ongoing proceedings carry the label *pending*; a claim about the outcome of a pending case is a source error, like an invented study.

S12 · The outlook is dated and falsifiable. The outlook chapter is built like the final task (dated prediction): predictions dated and sourced, counter-evidence included, falsification criterion named, evidence types labeled.

Part 2 · The presentation (30 minutes)

These four rows are the anchor sheet of the presentation half. You get it in the dress rehearsal, and it is identical in the exam. Run the self-check aloud, with a timer, against your own slides.

P1 · Trace visible. Your answers name decisions, discards and prices, with details from your own iteration protocol.

P2 · Anatomy complete. Claim → evidence → limit → price, for every core decision. Every follow-up question sorts into one of the four links.

P3 · Moderation active. You moderate the discussion: acknowledge and sort, answer the strongest reading, park politely and actually return.

P4 · The hardest objection handled. You can answer the price question ("What did your decision cost?") and your own fear question concretely, from the protocol, with your discards at hand.

Self-assessment

1. Compare each criterion (S1–S12, P1–P4) with your draft and score it: **2** = holds, and would survive a follow-up question · **1** = present, but would tip under a follow-up · **0** = missing.
2. Add up your points (maximum: 32).
3. Convert to percent with the factor 3.125 (= 100 / 32).
4. Assign an indicative grade using the grade table. The grade is indicative only: the colloquium tests the trace live, and the weighting of the two halves is [OPEN].

Grade table

Grade	from %	to %
1.0	96	100
1.3	91	95
1.7	86	90
2.0	81	85
2.3	76	80
2.7	70	75
3.0	65	69

Not enough space?

Please use the back of the previous sheet

3.3	60	64
3.7	55	59
4.0	50	54
5.0	0	49

Points	Percent	Indicative grade
--------	---------	------------------

What to fix before submission

Take your three lowest-scoring criteria. For each: the criterion, the one concrete change, and where the material already exists (iteration protocol, exercise sheet, audit response, anchor sheet).

Fix 1 – criterion · change · source material:

--

Fix 2 – criterion · change · source material:

--

Fix 3 – criterion · change · source material:

--

Confirmation of the self-assessment

The final step: by writing my name in block letters, I confirm that I have assessed my work fairly and to the best of my knowledge.

Name (block letters)	Date
----------------------	------
